DEVICE TEST

1, Explain behaviour of hub device

* Layer 1 device

* Broadcast data to all devices & destination device will reply to source.

* There will be a collision of data / packet loss

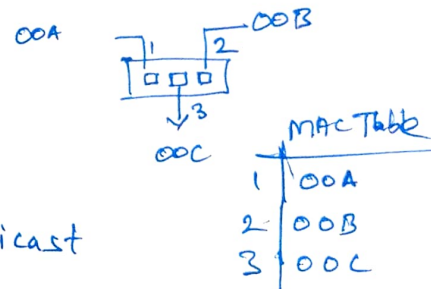

2, Explain behaviour of switch device

* Layer 2 device.

* Uses mac table,

* It will broadcast & unicast

* It uses Address learning process, it will collect port & MAC of source & check and collect port / MAC of destination in mac table for 5 minutes

3, Explain behaviour of router device

* It work in Layer 2

* It routing table, for all network

If the received request route, possible / check Routing table, if it's there, It will transfer packets (or) drop if it's not there.
